DISSEMINATION ACTIVITIES REPORT 1

Deliverable Identifier: D8.2

Delivery Date: 31 October 2016

Classification: Public

Editors: C. Oikonomopoulos, IMST GmbH

Document version: V1.0

Contract Start Date: 1 Mai 2015

Duration: 36 months

Horizon 2020

Call: H2020-MG-2014_TwoStages

Topic: MG-3.5a-2014

Type of action: RIA

Revision History

Version	Date	Description and comments	Edited by
0.1	14Dec2016	First Draft Version	C. Oikonomopoulos
0.1	14 Dec 2016	Completed	C. Oikonomopoulos
0.2	19 Dec 2016	Review	UPRC, MAN, TNO
1.0	19 Dec 2016	Final	C. Oikonomopoulos

1 Dissemination Plan

1.1 Description

This document contains a dissemination Plan of proposed activities and associated tasks with a specific purpose to interact with other parties in the European community that share an interest in the kind of results targeted within the ROADART project. ROADART will ensure the dissemination of results of the project to decision and policy makers at national, European, and global level, to business managers and market leaders, and of course to researchers, scientists, and innovators. ROADART will establish channels for providing information on the project during its lifetime defining, and ensure that the results of the project are in use during the lifetime of the project and after the project has finished. The progress of the dissemination actions will be in the responsibility of all partners while the WPs and the tasks within it will be led by IMST.

1.2 Dissemination Activities

First an overview of different dissemination activities corresponding tasks is introduced in this paragraph as follows:

- 1) ROADART will prepare a structured plan for dissemination activities to achieve a comprehensive impact at both the national and international levels.
- 2) ROADART will set-up and maintain a project web-site that will act as an information and service portal, disseminating project results and providing access to standards, reference implementations, demonstration software, and material explaining the project's innovation.
- 3) ROADART promotes the project results through their participation in national and European market fairs.
- 4) The project will establish close relationships with appropriate within the H2020 networking.
- 5) The project advertises its production capabilities and services through technology commercialization networks such as the C2C-CC, in order to increase visibility, raise public awareness, and technology availability for all different institutes from academy to industry.
- 6) All consortium members and especially the academic partners will exploit the identified dissemination channels, such as publications in international academic and trade journals, conference proceedings, and national publications.

1.3 Current Dissemination Status

The following table summarizes the present status with respect to the proposed dissemination activities and tasks of chapter 1.2 (within a timeframe of a 1.5 years from now)

Dissemination plan preparation	First version available as described in this document (to be updated during the course of the project)
Project web-site and maintenance	Reservation of project web-site: http://www.roadart.eu Set-up and maintenance will be done at IMST
Participation in national and European market fairs (planned during 2017-2018)	Flyers in Conferences and Exhibitions (TBD for the next period)
The project will establish close relationships with appropriate projects and clusters within the H2020 networking.	Coordinators Workshop activities, collaboration with other H2020 ICT projects
Advertise services through technology commercialization networks such as the C2C-CC (increase visibility, raise public awareness,	TBD for the next period through presentations and flyers in the C2C-CC Through invitations to describe the Projects

and technology availability for all different institutes from academy to industry)	goals directly in industry and companies related with ITS.
Publish results in international academic and trade journals, conference proceedings, and national publications	<ul style="list-style-type: none"> • Submit conference papers on first scientific results derived in ROADART like iWAT, EUCAP, IEEE vehicular Technology Conference (VTC), IEEE International Symposium on Personall, Indoor and Mobile Radio Communications (PIMRC), IEEE International Conference on Communications (ICC), IEEE Global Communications Conference (GlobeCom) • Scientific Journals in the framework of Roadart: IEEE Wireless Communication Letters, IEEE Transactions on Intelligent Transportation Systems (ITS) • World Congress on Intelligent Transport Systems (ITS) • interview in EU Research magazine
Communicate results in other fora	<ul style="list-style-type: none"> • The results will be presented in the Inclusive Radio Communications (IRACON) COST CA-15104 action. IMST and UPRC are members of the consortium.
Communicate results through professional social networks	<ul style="list-style-type: none"> • LinkedIn and ResarchGate
